11 Requirement Traceability Matrix	12

12. Risk and mitigation	13
13. Reporting tool	13
14 Test summary	13
15. Approvals	13

1.Scope and overview:

Scope:

This system allows the customer's to maintain their cart for add or remove the product over the internet. The customer can purchase any product from the product page. This will includes functional and non functional requirement.

Functional Requirement:

- Secure registration and profile management facilities for Customers
- Adequate searching mechanisms for easy and quick access to particular products and services.
- Creating a Shopping cart so that customers can shop 'n' no. of items and checkout finally with the entire shopping carts. Customers can add or delete items in the cart.
- Maintaining database of regular customers of different needs.
- Shop employees are responsible for internal affairs like processing orders, assure home delivery, getting customer's delivery-time feedback, updating order's status and answering client's queries online.
- Feedback mechanism, so that customers can give feedback for the product or service which they have purchased. Also facility rating of individual products by relevant customers.
- Adequate payment mechanism and gateway for all popular credit cards, cheques and other relevant payment options, as available from time to time.

Non Functional Requirement:

- Secure access of confidential data (user's details).
- 24 X 7 availability
- Performance:

The performance depends on hardware specification

Reliability:

The system is available during online time only.

Overview:

This system provides an easy solution for customers to buy the product without going to the shop and also to shop owner to sale the product. This proposed system can be used by any naïve users and it does not require any educational level, experience or technical expertise in computer field but it will be of good use if user has the good knowledge of how to operate a computer.

2. Test Approach:

- Test levels
- Test types
- Roles and responsibilities
- Environment requirements

3. Test Levels:

Levels of testing such as unit testing, integration testing, system testing and user acceptance testing should be used while developing an application.

4. Test Types:

For developing this application we need to perform some testing for better quality of a software or a product. The type testing used for this application includes,

a) SMOKE TESTING

 This testing was done whenever a Build is received (deployed into Testenvironment) for Testing to make sure the major functionalities are working fine, Build can be accepted and Testing can start.

b) SYSTEM INTEGRATION TESTING

- This is the Testing performed on the Application under test, to verify the entire application works as per the requirements.
- Critical Business scenarios were tested to make sure important functionalities in the application works as intended without anyerrors.

c) RETESTING TESTING

- Re-testing is executing a previously failed test against new software to check if the problem is resolved. After a defect has been fixed, re-testing is performed to check the scenario under the same environmental conditions.
- Retesting ensures that the issue has been fixed and is working as expected.
- In some cases the entire module is required to be re-tested to ensure the quality of the module.

d)SANITY TESTING

- Sanity testing is done to check the bugs have been fixed after the build.
- Sanity tests helps to avoid wasting time and cost involved in testing if the build is failed. Tester should reject the build upon build failure.

e) COMPONENT TESTING

• Component testing is a software testing method where "units"—the individual components of software—are tested. Developers write unit tests for their code to make sure that the code works correctly. This helps to detect and protect against bugs in the future.

5. Roles and Responsibilities

Role	Responsibilities
Project Manger	AnuMeha mam
Project Lead	Surya
QA	Aarthi,Surya,Swetha,Tamil

6. Environment requirements:

Software Environment

- Operating System: Windows7 Ultimate which supports networking.
- JAVA development toolkit. Hardware Interface:

Hardware requirements

• Processor: Dual Core

RAM:2 GB

Hard Disk:320 GB

7. Testing tools:

Test Automation Tools

- Selenium
- TestNG
- Test management tools-Jira

8. Industry standards to follow:

- IEEE- **Standard** for Software **Test** Documentation: This documentation should be follow during developing high quality software. IEEE series defines an internationally-agreed set of standards for software testing of software testing standards.
- The main purpose of the IEEE series is to provide such guidelines that can be used by any organization when performing any form of software testing. They should follow some documents that documents should provide requirements, specifications, guidelines, or characteristics that can be used consistently to ensure that materials, products, processes, and services are fit for their purpose.

9. Test deliverables:

Before Testing Phase	Test plan documents. Test case execution
	documents.
During Testing Phase	Test Data, Requirement Traceability matrix
After Testing Phase	Test closure report, Test Metrics

These are the documents we have created before starting our testing.

Test Scenario For Amazon Application

Test scenario ID	Test Objective/Test scenarios
TS_amazon_001	Validate the "Personal Information" feature as a new user
TS_amazon_002	Validate Email_id and phone number fileds
TS_amazon_003	Validate already existing users username and password
TS_amazon_004	Checking for product page availablilty
TS_amazon_005	Checking the product page, that user can select the desired attribute of the product.
TS_amazon_006	Searching for the product by their names
TS_amazon_007	Check the product availability, product price and product descriptions
TS_amazon_008	Selecting the product and adding product to the cart.

TS_amazon_009	Selecting the Payment button for buying the product
TS_amazon_0010	Verifying the mode of payment.
TS_amazon_0011	Customers Giving the reviews and feedback of the products.
TS_amazon_0012	Check the modules are present while opening the browser

Test case(Before starting our testing, we have created our test case documents for amazon)

Test case ID	Test Case
TC_newuser_01	Valid Usename
	Valid Password
	Valid Email_id
	Valid Phone_No
TC_newuser_02	Valid Usename
	Valid Password
	Invalid Email_id
	Valid Phone_No
TC_newuser_03	check the phone number fields
70	7 1 1 1 1 1 1 1 1 1 1 1 1
TC_newuser_04	To chech the email_id field
TC_existinguser_05	Valid Username
	Valid Password
TC_existinguser_06	Invalid Username
	Invalid Password
TC_existinguser_07	Valid Username
	Invalid Password
TC_existinguser_08	Invalid Username
	Valid Password

TC_product_09 Verify the product page is visible to the user or not TC_product_10 Verify the product colour _size and brand are clearly mentioned TC_search_11 Verify that search functionality field is available in the Screen od page of the application TC_search_12 Verify that the search functionality is able to do search according to the entered text in the search field while typing the text. TC_search_13 Verify that the product available or not and check whether the product price and description is available on that particular product TC_cart_14 Verify that user can add any number of item to the shopping cart functionality TC_cart_15 Check for price update when the user add or remove a new item to/from the cart TC_payment_16 Check whether the procced to pay option available or not and to click TC_payment_17 To select the payment option TC_feedback_18 To verify the rating given by customer TC_feedback_20 To verify whether user can support review by clicking the helpful button

10. Testing metrics:

Software testing metrics - Improves the efficiency and effectiveness of a **software testing** process

Some of these QA metrics examples are:

- Number of **tests** in a certain time period = Number of **tests** run/Total time.
- Test design efficiency = Number of **tests** designed/Total time.
- Test review efficiency = Number of **tests** reviewed/Total time.
- Number of bugs per test = Total number of defects/Total number of **tests**.

11. Requirement Traceability Matrix:

12. Risk and mitigation

- Use secure passwords
- Payment Security
- Privacy issues
- System reliability

13. Reporting tool:

JIRA will be the reporting tool for this project.

14 Test summary:

The test strategy document is created for Amazon as per the document content. It needs to be reviewed for sign-off by all entities involved in project management, business team, development team, and system administration (or environment management) team

15. Approvals:

The following people are required to approve the Test Strategy

Approved By Role	Approved By Name
Project Coordinator	Anu Meha
